

M-RETS 11.5 Overview

Last Updated July, 2013

Introduction

M-RETS 11.0 was released into production February 19th 2013. This release updated the M-RETS reports to the ASP.NET platform. The updated platform gives flexibility to add functionality from a prebuilt application (Telerik) that was previously not available using the old platform. During the User Acceptance Testing (UAT) phase of M-RETS 11.0 development, the Account Holders expressed interest in modifying the new reports. In addition to making modifications to the new reports, certain functionality was replaced using the Telerik application that the testers expressed interest in re-releasing with the new functionality to give more flexibility to the M-RETS users. M-RETS 11.5 addresses these requests.

What is included in M-RETS 11.5?

Automatically adjust report vertical height for browser height (All Reports)
 The M-RETS 11.0 UAT Testers reported that the report vertical height was fixed, resulting in a
 small report window when using high resolution monitor settings or when the browser is
 zoomed out to maximize the viewing area. Updating the reports to use a variable vertical
 height will ensure that all M-RETS account holders can view the report using their full screen
 with all page controls available.

• Add Old Advanced Filter to Certificate Disposition (r=601) and RRC Conversion Reports The Advanced Filter was designed to allow the user to preselect RECs or RRC based on selected criteria in the RRC conversion and Subaccount Reports. M-RETS 11.0 added the Expression Builder to allow the Account Holder to apply a multi-criteria filter using logical operators to preselect RECs or RRC. The Expression Builder expanded this filtering functionality to all reports that was not previously available. The UAT Testers asked for the

advanced filter to be re-implemented to the Certificate Disposition (r=601) and RRC Conversion Reports. We are implementing the Add Select/Deselect All to the Advanced Filter fields.

• Report Spacing

The UAT Testers reported that the spacing of the new reports could be updated to make more efficient use of the available screen. We are working to consolidate the report screen.

Report Performance and Browser Caching

We have received comments that certain reports may take an extended time to load. While it is expected that some reports will take longer to load when more data is being queried from the database, we are working with the Telerik application to make changes that should improve report efficiency.

What is the cost to M-RETS Subscribers to make the M-RETS 11.5 improvements?

M-RETS 11.5 is a maintenance release which is being developed at no cost to the subscribers.

When will the 11.5 Maintenance release be available?

While there is no release date scheduled for M-RETS 11.5, we anticipate this work to be finalized in the 3rd quarter of 2013.
