

QA Engineer

Description

M-RETS is a 501(C)(4) non-profit that owns and manages a renewable electricity certificate and renewable thermal certificate tracking system. If renewable energy tracking sounds exciting, you may be a great fit for our team. As the QA Engineer at M-RETS you will have the opportunity to be part of some cutting-edge developments in decarbonizing our economy. The M-RETS platform is the leading renewable certificate tracking system and is used by Fortune 25 companies, utilities, and regulators. We have over a decade of rich industry data that increases each year. We want to continue to deliver a strong platform and keep ahead of changes in the energy industry via innovative and useful features to support our organizational goal of growing our sophistication as a data organization. With M-RETS you will work on projects that matter, and you will help our platform deliver more value and impact through infusing the market with enhanced data and information.

We are looking for a QA Engineer to be a key member of our team. You would work to improve feature and data quality, decrease production issues, and improve the overall experience for those working within the M-RETS platform. As part of this, you would contribute to growing and new testing plans, tools, solutions, and our integration suites to further improve quality. You'll also collaborate with the team to help fill in where we have gaps in our coverage. Our tech stack includes a Rails API backend and React frontend and our ten person development team is a mix of local and remote team members from four different countries. You would report to our Software Engineering Manager and work closely with our other QA Engineer, the development team, our Technical Program Manager and our Technical Program Coordinator.

We are looking for someone who is a culture fit and loves QA and the testing process. At M-RETS we have a unique culture, we want people to love where they work and what they do. For our team in Minneapolis, we have a hybrid workplace where team members can come in a couple times a week and collaborate. We have reserved offices in a great co-working space in downtown Minneapolis. We are open and value diversity and diversity of opinion, we love what we do and value the chance to make a difference.

Responsibilities

- Contribute to all parts of the testing, maintenance, and documentation process

- Perform manual QA testing and thorough regression and sanity testing as part of our normal sprint release cycle
- Learn and contribute to automated integration suite and automation testing tools
- Collaborate with writing automated integration, spec, unit, and other test case development
- Improve and expand automated continuous integration testing
- Maintain existing test tools, plans, workflows
- Evaluate correctness of data moving through workflows and automate data testing
- Identify, record, document thoroughly, and track bugs
- Help triage production issues, impact, and priority
- Advise the team on testing best practices and tools
- Work with team to refine current testing workflows and plans
- Review test code, workflows, documentation, designs, work done by team members, and receive code reviews

Requirements

- 3-5+ years Professional Experience
- Relevant education or training background, but not required if experience qualifies for the position
- Interested in learning new languages and test tools
- Excellent problem solving, analytical, communication, and organizational skills
- Experienced with Selenium Selectors and adjacent tools
- Experienced testing API's
- Experienced writing integration and spec tests
- Experience with standard QA tools, testing suites
- Experience working with an agile development process
- Enthusiasm and strong desire to learn a lot quickly
- Detail oriented
- Able to communicate clearly and respectfully with team members
- Comfortable working with a small team of colleagues
- Support an interest in M-RETS mission

Nice to have

- Experience with Ruby RSpec and Capybara
- Experience with React Jest testing
- Experience with Javascript testing tools such as Cypress, Mocha, Jasmine
- Experience using Postman or Insomnia
